

StreamSafeRecords - 'Royalty Free' Content Sync License Terms

- All music offered by StreamSafeRecords is available to use 'royalty free' in freely distributed digital media that profits from content host advertising, viewer support, and content sponsorship deals.
- StreamSafeRecords provides music through the following artist and sub-label handles...
 - Cratesets
 - Strength in Doom
 - Club Occult Noir
 - Buckwitted
- 'Royalty free' (also phrased as 'copyright safe') is defined as the expectation on the part of a content creator that the copyright owner of the StreamSafeRecords music collection will avoid intercepting monetary profits generated by user created content to the best of their abilities.
- Use of StreamSafeRecords music must give full credit within the digital media (visual or spoken) and as part of supporting text descriptions or end titles.
- Examples of allowed use include...
 - Background music in edited videos.
 - Background and idle music during livestreams and podcasting.
 - Inclusion in playlisting for DJ sets and radio livestreams.
 - Backing music as part of musical performance practice and live shows.
 - Background music in video games (but not as part of separate soundtrack distribution).
- The 'royalty free' right to use StreamSafeRecords music does not extend to media sold for profit. Freely distributed digital media with a 'pay what you want' option is considered viewer support and is allowed. Media sold for profit, both digital and traditional, requires a paid license obtained through CD Baby Licensing.
- StreamSafeRecords music maintains full copyright and can not be solely redistributed, sampled, remixed or used as part of new music.
- Instances of public performance royalty gathering enforced by law (EG: DJing, live backing tracks) are beyond the means of StreamSafeRecords to avoid.
- StreamSafeRecords music can not be used as part of any content considered harmful, adult or illegal in nature.
- Instances of DMCA actions by third party content recognition systems (both legit and false-positive) are not the responsibility of the copyright owner of StreamSafeRecords to compensate for.
- Resolution assistance offered by StreamSafeRecords to solve false-positive notices is voluntary and dependent on available time, involved entities, and their locations.

Please use the contact form on <http://www.streamsaferecords.com/> for any questions related to this license and to request resolution assistance.
